## Should Apple recruit their next designers at Holly meadows School?

Lynn-based medical devices business Merxin Ltd has sponsored Holly Meadows School in Pott Row with creative Block Play equipment designed to foster inventiveness in children and help them learn about construction and water play. The giant wooden construction blocks, which Merxin donated £1000 for the purchase, allows the children to bring their imagination to life through experimental building.

"It's so important that in today's world children get access to the right kind of equipment to help them develop vital, practical learning skills as they progress through education. In turn this helps to develop a problem-solving mindset, which is something Merxin relies on every day." mentions Graham, Merxin's Chief Technology Officer. Merxin are also part of Sir Henry Bellingham's West Norfolk 4 Jobs scheme which helps young people to gain access to mentoring and helps set them up to gain a job. Merxin looks to support education where possible to help drive young students to gain necessary skills for success at work.

"With Block Play, children must let their imagination play riot, and create functional objects such as seesaws, cars, and test science knowledge like gravity play. It encourages collaboration and invites multiple children to work together with each other's ideas to solve problems and make new things" mentioned Mrs Wildsmith-Garton Headteacher of Holly Meadows.

Mrs Wildsmith-Garton furthered "It's just such a lovely resource that ticks so many boxes in the curriculum, with budgets in schools getting ever tighter, funding that used to buy exciting equipment like this now has to pay for teaching staff, so donations from local business like Merxin give the school a fighting chance to encourage the next generation." Merxin wishes to encourage other business that is thinking about supporting a cause to consider helping local schools, vital donations can support children for years to come.

Merxin are designers and suppliers of inhaler devices that treat lung diseases, reduce vaping risks, and make cannabis therapies reliable. They make the world healthier one breath at a time. Their DNA is in the pharma industry: delivering quality, reliability and efficacy. Merxin is global and has been from the beginning.
